

Collaborator: Buzz Uber, Crop Inspection Service
Location: Valley Center, California

Test Methods

Test Species: 10 adult brown garden snails (*Helix aspersa*) per arena

Treatment Application Date: May 16, 2011

Evaluation Interval: 1, 3, 7, 14, 19, and 26 DAT (days after treatment).

Plot Description: 3' x 3' Cages with 1/4" galvanized mesh wire with hinged tops. Native soil described as clay/loam was used for the arena bottoms. Cages were placed under skirts of Citrus trees. Groves are certified organic. Irrigation cycle was set for 15 minutes each evening

Plant Material: Two French Marigolds (4" pots) were planted at same location in each arena

Competitor Active Ingredient: Metaldehyde

Conclusion: Ferroxx significantly outperforms competitors and untreated plots.
