

Control of brown garden snails in the field
 (Uber, California, 2009)

Collaborator: Buzz Uber, Crop Inspection Service
Location: Valley Center, California

Test Methods

Test Species: 10 adult brown garden snails (*Helix aspersa*) per arena

Treatment Application Date: Oct. 27, 2009

Evaluation Interval: 3, 7, and 14 DAT (days after treatment).

Plot Description: 3' x 3' Cages with 1/4" galvanized mesh wire with hinged tops. Native soil described as clay/loam was used for the arena bottoms. Cages were placed under skirts of citrus trees, with 5 replicates per treatment. Groves are certified organic. Irrigation cycle was set for 40 minutes each afternoon.

Plant Material: Two French Marigolds (4" pots) were planted at same location in each arena

Conclusion: Sluggo Pro kills a significantly higher number of slugs over two weeks than traditional baits.
