

FOR PCO USE

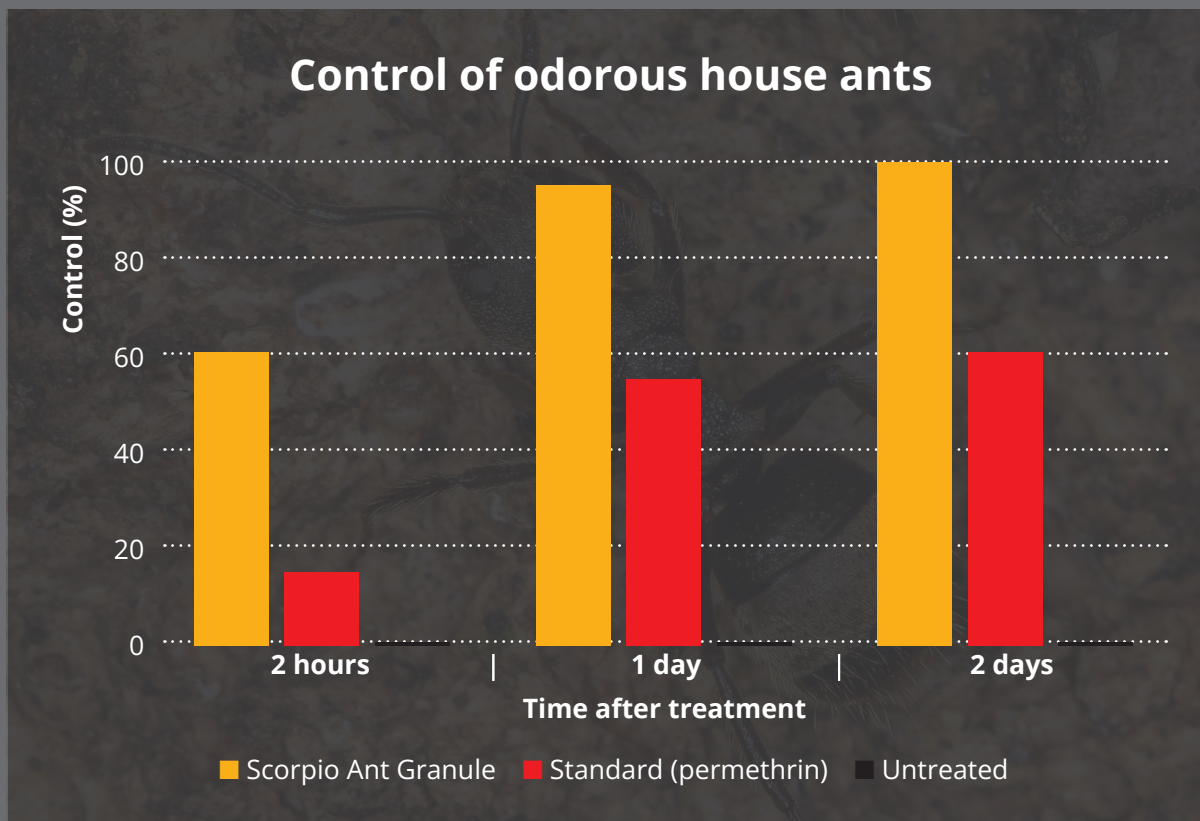

SCORPIO[®]
ANT GRANULE

Reg. No. 33342 PCP Act

Effective. Flexible. Friendly.

- **Active Ingredient:
Pyrethrins 0.175%**
- **Easy to use, clean to
handle and economical**
- **Odourless**
- **Contact and residual activity**
- **Can be used dry or diluted
in water as a drench**
- **Made with botanical pyrethrins
from chrysanthemum flowers**
- **May be used around
commercial and
agricultural buildings**

For PCO use

Scorpio Ant Granules contain pyrethrins, a botanical insecticide that does not persist for long periods in the environment but has fast-acting contact and short-term residual activity. Use this product as part of an Integrated Pest Management (IPM) program to protect structures and planted areas from ants using broadcast, perimeter, or targeted drench applications.

How it works

Pyrethrins are extracted from chrysanthemum flowers and are fast acting, affecting the nervous system of the ants.

Application rate

Perimeter and broadcast: 10-15 g/m²
Drench: 20-50 g of granules in 1L water/m²

Where to use it

Outdoor use only. Use in and around landscaped areas, ornamental gardens, turf (such as lawns, athletic fields, golf courses), non-crop areas (such as parks, industrial sites, fallow land), decks, pathways, sidewalks, and on grounds around residential, institutional, commercial and industrial structures.

What it controls

Kills foraging ants, sweet-feeding ants, pavement ants, moisture ants, little back ants, Argentine ants, acrobat ants, cornfield ants, field ants, ghost ants, odorous house ants, thief ants, harvester ants, fire ants, pharaoh ants, and other common ants.
